Guardian Emergency Mustering.

Ensure everyone is safely accounted for during a true emergency

The Guardian Emergency Mustering solution ensures organizations can efficiently manage personnel safety during emergencies with advanced tracking, communication, and reporting tools. The software provides features for seamless evacuation oversight and roll call management, empowering responders to act swiftly during critical situations.

Benefits

Comprehensive Evacuation Oversight.

The mustering dashboard offers dynamic visibility into the evacuation process, including a real-time view of missing individuals and their last known locations. This feature enables first responders to quickly identify individuals who might need assistance.

Mobile Roll Call Application.

The mustering module operates seamlessly even in environments without local network connectivity. Emergency personnel can access lists of missing persons and update the roll call manually, ensuring accurate tracking of all individuals onsite. The mobile application supports drill modes, allowing organizations to run preparedness exercises efficiently.

Muster Points Application.

Employees and visitors are marked safe through badge scans and QR code swipes at muster points. This simple process shifts their status from 'Missing' to 'Safe', streamlining the verification process. Additionally, emergency responders with the correct authorization can start or end emergencies via access card scans.

Mass and Manual Notifications.

The platform allows for mass notifications during an emergency and manual alerts to Emergency Response Teams (ERTs) and specific individuals. This ensures that everyone remains informed and aligned on necessary actions.

In-App Communication.

The module integrates in-app chat capabilities, allowing emergency teams to communicate directly with security or other relevant personnel. This helps expedite critical decision-making, enhances situational awareness, and supports faster evacuation processes.

Key Features

Mustering App For Enclosure.

- Badge Scanning: Automatically updates an individual's status from 'Missing' to 'Safe' when their access card is scanned
- QR Code Scanning: Visitor QR code swipes update their status from 'Missing' to 'Safe'
- Start/Stop Emergency: Authorized emergency responders can initiate or end emergencies by scanning their access card

Mustering App for Handheld Devices (Android).

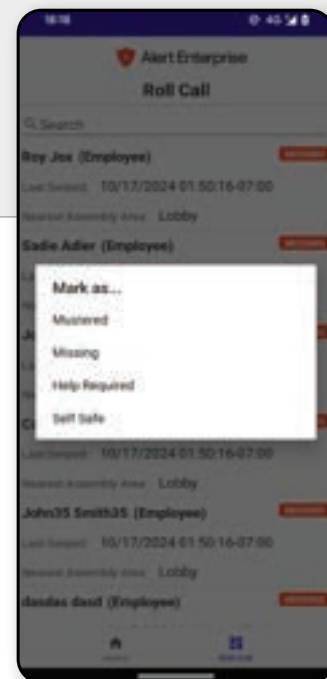

- Standalone Operation: Functions independently of local network connectivity, ensuring uninterrupted use during emergencies
- User Interface:
 - Displays a complete list of all individuals onsite and tracks evacuation progress
 - Allows emergency personnel to filter and view only missing individuals
- For each missing person, responders can access their last known location and update their status using:
 - Badge or Visitor QR code scanning
 - Manual Lookup: Search and update if the person lacks both credentials

Manual Updates: Mark Individuals as Safe

Graphical Dashboard:
Visualize Evacuation Progress
& Completion Status

Key Features

Emergency Dashboard.

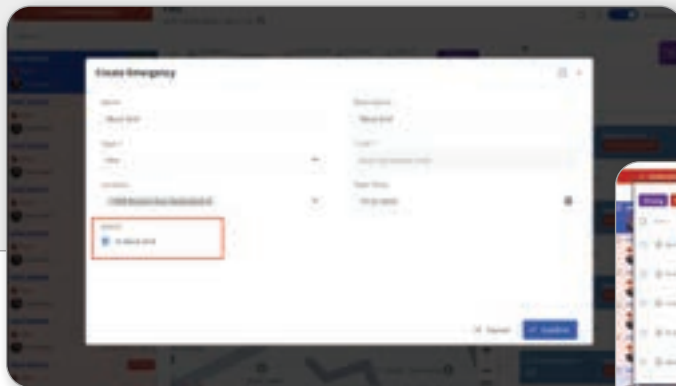

Real-Time View: Missing Individuals With Last Known Location

Map View: Provides Geospatial Overview of Emergency Site

Drill Mode.

- Simulated Emergency Drills:
 - Emergency responders can conduct drills to test preparedness
 - Separate Reporting: Drill data is kept distinct from actual emergencies to avoid confusion in reports

Simulated Emergency Drills

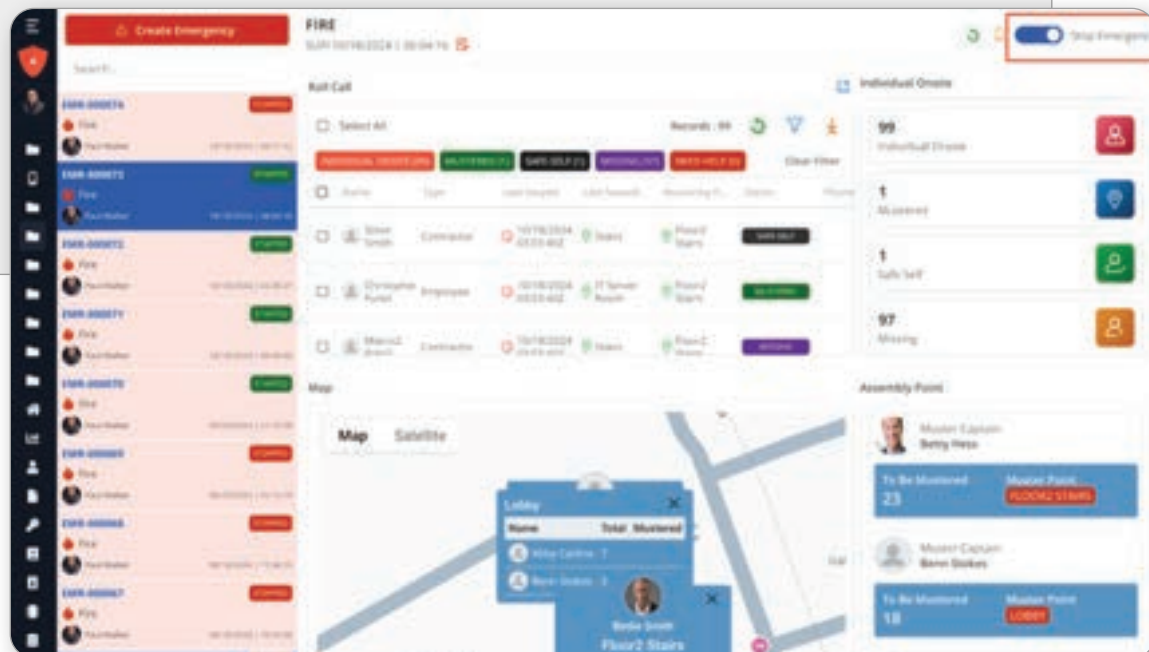

Separate Reporting for Drills

Key Features

Emergency Mode Indicator.

Always-On Alert

An active emergency indicator is prominently displayed across all screens within the application, ensuring continuous awareness for users.

Summary of Benefits.

Improved Safety:

Ensures accurate and real-time tracking of all personnel during emergencies

Streamlined Processes:

Easy-to-use scanning and manual lookup tools reduce delays during mustering

Enhanced Coordination:

Mobile apps allow responders to act swiftly, even without network connectivity

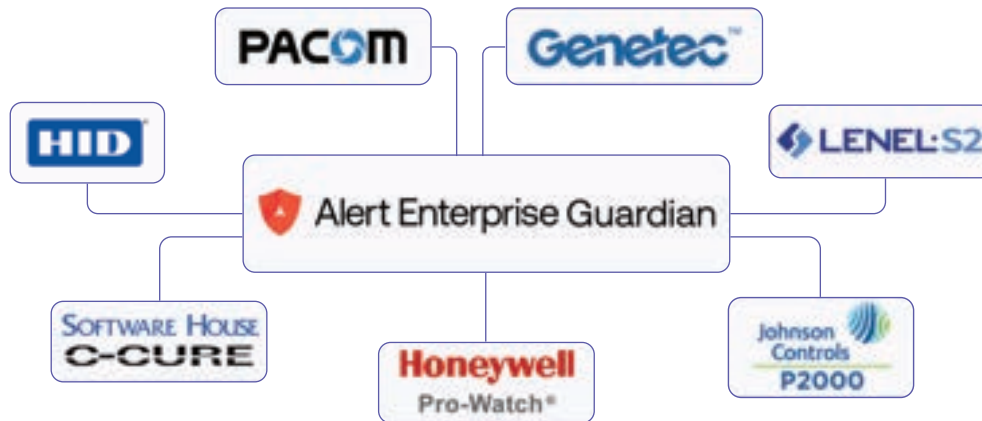

Comprehensive Reporting:

Drill and real-time data separation ensures actionable insights for compliance and future planning

Alert Enterprise

Physical Access Control Integration.

Guardian Emergency Mustering software is pre-integrated with leading Physical Access Control Systems (PACS), extending the same level of protection for visitors and contractors as internal staff, enforcing request approval before granting access through the enterprise-class workflow engine.
